# WHAT DOES PERFECTION MEAN TO YOU?

Optimal function? More authenticity? Maximum naturalness?  
Successful tooth design knows only one benchmark: your own standards  
and those of your patient.

We have been designing teeth since 1936, like the **PhysioSelect TCR**.

**CANDULOR. HIGH END ONLY.**

# CANDULOR SERVICES

---

## TOOTHSCOUT APP FINDING THE RIGHT ONES WITH THE TOOTHSCOUT

---

The app is an aid for dentists, dental technicians and prosthodontists, which facilitates the selection of tooth molds. This allows selection of suitable, esthetic teeth with a natural look for every patient. In addition, it is possible to create short and informative patient files in which the selected tooth molds can be saved. The requests can be sent directly from the app by email to the selected dealer.

**Download from the App Store and test it.**

## EIFU.CANDULOR.COM ONLINE INSTRUCTIONS FOR USE

---

You can find the instructions for use for CANDULOR products on the website **[eifu.candulor.com](http://eifu.candulor.com)**.

If you wish to receive the instructions for use in paper form, please contact the manufacturer CANDULOR AG. To do this, please use the telephone number **+41 (0)44 805 90 00** or the email address **[candulor@candulor.ch](mailto:candulor@candulor.ch)**. The instructions for use will be sent to you free of charge by post within seven days.

## SWISS SCHOOL OF PROSTHETICS BY CANDULOR

---

Knowledge makes you strong as tomorrows patients need your expertise.

Learning, understanding and applying removable dentures with the SWISS DENTURE PROGRAM.

# TOOTHLINES. DESIGNED TO CAPTURE PEOPLES' IMAGINATION.

---

The CANDULOR tooth lines have always aimed at capturing peoples' imagination. Natural authenticity – with its exceptional esthetics, color stability and function – makes our tooth lines extremely versatile with every material.

## PHYSIOSTAR® NFC<sup>+</sup>

THEIR SURFACE TEXTURE,  
LAYERING AND COLOR EFFECT  
MAKE THEM UNIQUE.

The NFC<sup>+</sup> material impresses with its very good abrasion resistance, which is significantly higher than that of the tooth materials previously used by CANDULOR. The particularly abrasion-resistant NFC<sup>+</sup> material was developed to counteract premature wear of teeth and the associated vertical loss of dimension.

### Material

NFC<sup>+</sup> is a composite based on a urethane dimethyl acrylate matrix (UDMA matrix) composed of various types and sizes of fillers as well as PMMA clusters. This results in very good physical material properties, such as abrasion resistance and shear strength.

### Layering

Close attention to give a natural appearance has also been a feature of the layering and esthetics. The material is built-up in four layers, which guarantees colorfastness in the mouth and gives a particularly natural appearance.

## NANOFILLED COMPOSITE

Composite material with a homogeneous distribution of inorganic fillers and PMMA clusters

-  UDMA matrix
-  Compressed silanized SiO<sub>2</sub>
-  Silanized SiO<sub>2</sub> nanoparticles
-  PMMA clusters
-  Inorganically filled UDMA polymer

## PHYSIOSELECT® TCR

A LARGE VARIETY OF YOUNG,  
AUTHENTIC MOLDS FOR THAT  
YOUTHFUL FEELING.

The highly cross-linked TCR material is noted for its material and resistance properties.

### Material

TCR acrylic (TwinCrossedResin) is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are evenly cross-linked. This is done by again cross-linking the previously cross-linked polymer with the matrix in the production process. This ensures good abrasion resistance and resistance to plaque.

### Layering

The PhysioSelect® TCR is a composition of slightly translucent incisal contours with discreet mamelons and marginal ridge effects paired with a lively 4-fold layering and incisal light refraction. The surface structure gives the tooth a natural, youthful refraction of light.

## TWINCROSSED RESIN

Highly cross-linked PMMA network with increased cross-linking of the polymer chains

-  Polymer chains
-  Sporadic cross-linking

## PHYSIOSET® TCR

EXCEPTIONAL VARIETY OF TYPE-SPECIFIC TOOTH MOLDS AND A VERY SPECIAL SURFACE PROFILE.

The double cross-linked TCR material has good material and resistance properties.

### Material

TCR acrylic (TwinCrossedResin) is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are cross-linked. This is done by producing highly cross-linked polymer in combination with cross-linked matrix. This ensures good abrasion resistance and resistance to plaque\*.

### Layering

The appearance is achieved by the multi-layer process, life-like layering and the natural surface profile. With its two shade systems and the combination with good material properties, the TCR tooth line is suitable for both full dentures as well as partial and combined dentures.

\* Abrasion resistance, clinical study over 2 years; plaque resistance measured in the laboratory

## TWINCROSSEDRESIN

Highly cross-linked PMMA network with cross-linking of the polymer chains

 Polymer chains  
 Increased cross-linking

## PREFERENCE® ACRYLIC

A COMBINATION OF NATURAL ESTHETICS AND HIGH USER-FRIENDLINESS.

The Preference® tooth line is a combination of natural esthetics and user-friendliness. The proven PMMA material allows good bonding to prosthetic materials. The teeth have been selected for universal use in partial, full and combination dentures.

### Material

The available PMMA polymers on the market have significant differences in purity, enclosed porosities and contamination. Consistent grain size and molecular weight are also deciding factors in the production of teeth with good and consistent quality.

## ACRYLIC

Proven PMMA network with less pronounced cross-linking of the polymer chains

 Polymer chains  
 Sporadic cross-linking

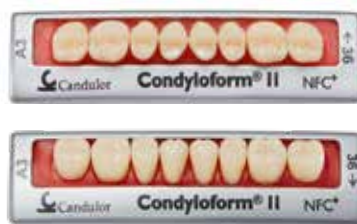

**PHYSIOSTAR® NFC<sup>+</sup>:**

*Its surface texture, layering and color effect make it unique.*

Its material formula of NanoFilledComposite® (NFC<sup>+</sup>) makes the PhysioStar® NFC<sup>+</sup> stand out from other CANDULOR tooth lines.

**PHYSIOSTAR® NFC<sup>+</sup>**

Perfection begins where a tooth line feels as natural for the patient as his/her own teeth. Color fastness, esthetics and shear strength – these are the strong points of PhysioStar® NFC<sup>+</sup>.

**CONDYLOFORM® II NFC<sup>+</sup>**

Prof. Dr. A. Gerber established the functional relationship between the shapes of the temporomandibular joints and the teeth and as a result, developed the Condyloform® tooth. The modern Condyloform II NFC<sup>+</sup> offers anatomically good occlusion design with age-adapted morphological and natural occlusal proportions and functional areas. The mortar-pestle principle according to Prof. Dr. A. Gerber was also integrated into the masticatory surfaces. This results in autonomous chewing stability as the palatal cusp of the maxillary teeth engages into the opposing central fossa of the mandibular tooth.

**BONARTIC® II NFC<sup>+</sup>**

The occlusion morphology of the lower posterior teeth stands in relation to the condyle path. The inclination of the occlusal plane (Spee, Wilson) can be arranged individually and reliably with the Bonartic® II NFC<sup>+</sup>. It is the most important stabilizing element for every prosthetic restoration. The teeth were optimized in terms of a natural tooth to two-tooth relationship.

## WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 15 maxillary and 5 mandibular sets as well as the two occlusion concepts Condyliform® II NFC+ and Bonartic® II NFC+. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

## PHYSIOSTAR® NFC+ A – D SHADES SHADE GUIDE

The 16 A – D shades and the 2 Bleach shades BL2 and BL4 can be determined with the PhysioStar® NFC+ A – D shade guide.

The PhysioStar® NFC+ A – D Shades shade guide serves to determine the shade of:

- > PhysioStar® NFC+ anteriors
- > Condyliform® II NFC+ posteriors
- > Bonartic® II NFC+ posteriors

## PHYSIOSTAR® NFC+ CANDULOR SHADES SHADE GUIDE

The 12 CANDULOR shades can be determined with the PhysioStar® NFC+ CANDULOR shade guide. The shade tabs are made of NFC+ material and are color-matched to the NFC+ tooth line.

The PhysioStar® NFC+ CANDULOR Shades shade guide serves to determine the shade of:

- > PhysioStar® NFC+ anteriors
- > Condyliform® II NFC+ posteriors
- > Bonartic® II NFC+ posteriors

**PHYSIOSELECT® TCR:**  
*A large variety of  
 young, authentic molds  
 for that new feeling.*

The fresh, youthful design of the PhysioSelect® TCR was developed from the origin of proven tooth molds. The teeth, which are designed in Switzerland, are made of the reliable TwinCrossedResin material.

## PHYSIOSELECT® TCR

The PhysioSelect® TCR is a composition of slightly translucent incisal contours with diskreet mamelons and translucent marginal ridge effects paired with a lively 4-fold layering and incisal light refraction.

A fine microstructure with horizontal growth grooves, plus a striking macrostructure with vertical ridges, grooves and fine openings gives the tooth a naturally youthful refraction.

## BONSELECT TCR®

The new posterior BONSELECT TCR® tooth was created to match the PhysioSelect® TCR – a posterior tooth with an occlusion concept that can be used multifunctionally for the most common setup systems.

Whether tooth-to-tooth or tooth-to-two-tooth, the BonSelect TCR® has a bifunctional tooth geometry that makes both setup systems possible. Simplified centric determination through defined contact points leads to an easily adjustable occlusion.

**PHYSIOSET® TCR: Exceptional variety of type-specific tooth molds and a special surface profile.**

Resin does not necessarily equal resin. As proven by CANDULOR with the TCR tooth line. The variety of molds results in a balanced assortment of type-specific tooth molds. The double cross-linked TCR (Twin-CrossedResin) material has good material and resistance properties.

The highly cross-linked polymer in combination with cross-linked matrix allows good bonding to prosthetics material, color stability, abrasion resistance and plaque resistance\*.

**PHYSIOSET® TCR**

The appearance is achieved by the multi-layer process, life-like layering and the natural surface profile. With its two shade systems and the combination with good material properties, the TCR tooth line is suitable for both full dentures as well as partial and combined dentures.

**PHYSIOSET® TCR X-SHAPES\*\***

The PhysioSet® TCR tooth line has been complemented with 18 new X-shapes made of the resistant TwinCrossedResin material which is plaque and abrasion resistant\*.

**BONARTIC® TCR**

The Bonartic® TCR combines the physiological laws of nature and the esthetic-morphological demands into a good looking denture tooth.

- > Tooth to two-tooth relationship
- > ABC contacts – functional/ balance-sided/centric

\* Abrasion resistance, clinical study over 2 years; plaque resistance measured in the laboratory

\*\* These products are only available in North America.

## WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 22 maxillary and 8 mandibular sets as well as the occlusion concept Bonartic® TCR. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

## PHYSIOSET® TCR SHADE GUIDE

The PhysioSet® TCR shade guide combines two shade systems. The most popular shades – 9 CANDULOR and 11 A – D shades – can be determined. The shade tabs are made of original TCR material which ensures shade conformity with the tooth sets.

The PhysioSet® TCR shade guide serves to determine the shade of:

- > PhysioSet® TCR anteriors
- > Bonartic® TCR posteriors

The disks TCR Mono and TCR Multi\*\* for the CAD/CAM technique can be found on page 46.

## TOOTH MOLDS

## PHYSIOSET® TCR X-SHAPES

## UPPER JAW ANTERIORS

**PREFERENCE® Acrylic:**  
*The combination of natural esthetics  
 and high user-friendliness.*

The proven PMMA material allows good bonding to prosthetic materials. The teeth have been selected for universal use in partial, full and combination dentures.

## PREFERENCE® ACRYLIC ANTERIORS

The naturalness of the teeth is created by the three-layered, authentic shade design. The diversity in shapes enables that you can choose the appropriate tooth for your patient.

## PREFERENCE® ACRYLIC POSTERiors

The posterior teeth are easy to position owing to their defined centricity. Due to the functionally designed occlusion surface, these can be used multi-functionally for the most common set-up philosophies.

## ORDERING DETAILS

### PREFERENCE® Acrylic

#### Product

PREFERENCE® Acrylic  
Anterior teeth

PREFERENCE® Acrylic  
Posterior teeth

### SHADE RANGE

**16 A – D shades:** A1, A2, A3, A3.5, A4, B1, B2, B3, B4, C1, C2, C3, C4, D2, D3, D4

**2 Bleach shades:** BL2, BL4

Teeth can only be supplied as complete sets!

Please note: when ordering the teeth, please state the mold, shade and material.

It is not possible to obtain additional molds or credit for opened sets.

## WORKING TOOTH MOLD GUIDE WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 15 maxillary and 5 mandibular sets as well as a Preference® Acrylic maxillary and mandibular posterior mold each. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

## PREFERENCE® ACRYLIC SHADE GUIDE

The Preference® Acrylic shade guide serves the selection of all 18 tooth shades of the Preference® Acrylic tooth line. You can now determine the tooth shade which matches your patient best individually from the 16 A – D shades. The integration of the two Bleach shades BL2 and BL4 extends the shade spectrum for the selection of very bright tooth shades depending on the wishes of your patients.

The Preference® Acrylic shade guide serves to determine the shade of:

- > Preference® Acrylic anteriors
- > Preference® Acrylic posteriors

PLEXIGLASS TOOTH CABINET  
FOUR DRAWERS

A space can always be found for this handy 4-drawer tooth cabinet made of plexi-glass. With 2 inserts each for 33 anterior sets of teeth and 2 inserts each for 22 posterior sets of teeth, this storage unit ensures that 110 sets of teeth are always within easy reach.

C-BOX TOOTH CABINET  
FOUR DRAWERS

The C-Box design consists resistant powder-coated aluminum. The tooth cabinet with its 4 sturdy drawers provides space for up to 220 sets of teeth and can be stacked. The plastic inserts allow optimal presentation of the tooth sets so that the right set is always within easy reach. The label slots make it easy to label the handles. Clarity and functionality thus simplify finding the right set of teeth as well as the managing of tooth stocks.

# RESINS FOR DENTURES. THE MATERIAL DENTURES ARE MADE FROM.

---

Every person has his/her very own natural gingiva. To replicate this as realistically as possible, our path led from transparent resins to specific semi-opaque pigmentation of the CANDULOR denture base materials which refract and reflect incident light, thus making artificial gums appear in natural pink tones.

When artificial appearance cannot be distinguished from natural appearance, that is when we have achieved our goal. A broad range of shades with numerous hues gives us the opportunity of creating perfect customized mixtures for every customer.

## XPLEX

### SELF/HOT-CURING HIGH IMPACT DENTURE BASE MATERIAL

XPLEX – the high-impact polymer for dual use. Developed to cover the different processes and needs in the laboratory. The polymer is suitable for cold and hot polymerization. Whether packing, pressing or pouring: the choice of HOT or COLD processing is governed by the respective HOT or COLD monomer component.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

#### Features

- > High impact strength
- > Good flow and modeling properties
- > Good bond to denture teeth
- > Good grinding and polishing properties
- > Esthetic appearance
- > Low adhesion of plaque and low tendency to diskoloration
- > Easy dosing

#### Descriptions

- > Complete denture prosthetics
- > Partial denture prosthetics
- > Implant prosthetics
- > Repairs to XPLEX HOT can be performed with XPLEX COLD

## AESTHETIC BLUE

### SELF-CURING DENTURE BASE MATERIAL

Self-curing AESTHETIC BLUE excels in particular through its good flow and modelling properties. This assures simple processing by both the cast and packing technique, even in case of two or more saddles. Different opaque shades, pink transparent and clear are available.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

#### Features

- > Semi-opaque pigmentation
- > Good flow characteristics
- > Good fit
- > Shape and color stability
- > Physiological colors

## AESTHETIC RED HEAT-CURING DENTURE BASE MATERIAL

RED – the AESTHETIC heat-curing polymer displays the entire spectrum of the harmonious CANDULOR color system. This gives the option of recreating the natural perfection of the gingiva. Different opaque shades, pink transparent and clear are available. Processing, shape and color stability are standard for heat-curing denture base materials.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

### Features

- > High accuracy of fit
- > Physiological colors
- > Low residual monomer content
- > Wide range of polymerization variants
- > Color stability
- > Simple handling
- > Semi-opaque pigmentation

#### Let it flow

AUTOPLAST was developed specially for the overcast and flask technique. This self-curing polymer is distinguished by its good flow properties.

#### Modelling made easy

The flow phase was set at about 3 minutes. After a transient phase of 5 to 6 minutes, the material can be modeled for a further 3 minutes. This means that several saddles can be worked easily and correctly with the casting method.

#### Features

- > Simple handling
- > Good flow and modelling properties
- > Long working time

#### Simply uncomplicated

The heat-curing polymer BASEPLAST was developed to provide an easy and uncomplicated processing option. Particularly noteworthy is the short swelling time and the adequate working time. The swelled dough does not stick and offers good pressing behavior.

#### Features

- > Good fit
- > Natural shade effect
- > Color stability
- > Simple handling
- > Low residual monomer content

AESTHETIC COLOR SET EASY  
FOR INDIVIDUALISTS

AESTHETIC BLUE

AESTHETIC RED

Every patient is an individual, and this should be reflected by the dentures. Customized for the patient to give a natural and unmistakable authenticity.

4 different color hues allow individual pigmentation of the gingiva, easily and quickly. The incident light is refracted by the semi-opaque pigmentation and reflects. This gives the pink of the artificial gingiva a particularly natural look.

FIBRES  
»VEINING« OF RESINS FOR DENTURES

The red fibres are incorporated into the denture base materials. This gives the gingiva a »veined« appearance and the dentures look natural.

ORDERING DETAILS

## AESTHETIC INTENSIVE COLORS

### INDIVIDUALIZATION OF THE GINGIVA

---

AESTHETIC Intensive Colors for the pigmentation of CANDULOR denture base materials for individual, esthetic work. You can create very special accents with the color pigments, which can be dissolved in the monomer. As special as your patient.

#### Applications

- > Difference from natural gingiva hardly distinguishable
- > Gingiva can be individually shaded to suit the patient

## AESTHETIC INTENSIVE COLORS OPAQUE

### GREATER OPACITY

---

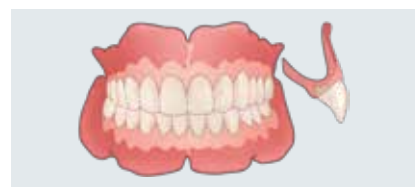

This highly concentrated pigment is mixed as additional powder in small amounts to the AESTHETIC denture base material to achieve greater opacity. Another indication is the covering of thin acrylic layers in the cervical regions of the teeth and over metal parts.

#### Applications

- > Greater opacity is achieved when customizing the denture base
- > This reduces the visibility of metal parts, which is particularly beneficial in the case of partial or implant dentures
- > Can be mixed with PMMA resins
- > The powder dissolves easily and mixes well, thus ensuring simple handling
- > The AESTHETIC Intensive Colors Opaque was specially formulated for use with CANDULOR AESTHETIC materials
- > Can be mixed with hot- and self-curing polymers

### Characterization with AESTHETIC BLUE and AESTHETIC RED

# AESTHETIC LT MODELLING MONOMER

## MORE TIME FOR CHARACTERIZATION

To obtain a longer modelling phase, you can use the AESTHETIC LT Modelling Monomer to organize your working time better and prevent the denture base material from drying out. It is suitable for use with AESTHETIC Intensive Colors.

### Applications

- > The denture base material offers enhanced modelling characteristics due to its smooth consistency
- > This results in simpler handling when characterizing denture base materials
- > Available for hot- and self-curing polymers

TCR MONO & TCR MULTI\*

DISKS FOR HYBRID WORK PROCESSES

TCR Mono is a tooth-colored, mono-chromatic stained milling disk.

With the multichromatic colored disk TCR Multi, the harmonious color gradient ensures a high level of esthetics, making subsequent characterization no longer necessary.

The entire product family is made of durable TwinCrossedResin, the 3rd generation TCR material.

The application possibilities of the disks are numerous. They can be used for the fabrication of single teeth and tooth segments, for creating full dentures through to hybrid dentures.

The 20 mm thick TCR Mono und TCR Multi disks with a diameter of 98.5 mm are available in the shades A1, A2, A3, A3.5, B1, B3, C2 and D2. In addition, the bleach shade BL3 is also offered.

## XPLEX BASE\*

### HIGH-IMPACT DENTURE BASE DISK FOR HYBRID WORK PROCESSES

XPLEX Base are 30 mm thick, gingiva-colored milling disks - with a diameter of 98.5 mm - made of impact-resistant denture base material for the CAD/CAM-supported fabrication of denture bases. They are designed to match the CANDULOR XPLEX denture materials.

#### Features

- > High level of individuality and flexibility in processing
- > Proven CANDULOR quality for high esthetics and natural appearance

#### Shade range

- 1 Soft Pink – transparent, not veined
- 5 Pink – transparent, veined
- 34 Original Pink – semi-opaque, veined

# AUXILIARY MATERIALS. SPECIALISTS NEED THE RIGHT TOOLS.

---

Our vision is to create a design which is equal to nature.  
We give dental technicians the tools to exploit the full  
range of options and to excel – like a musician composing  
a new melody.

## KMG LIQUID HIGH-GLOSS POLISHING LIQUID

### ORDERING DETAILS

#### KMG Liquid 1 item

Art. no.	Quantity
693113	500 ml

#### KMG Paste 1 item

Art. no.	Quantity
686162	100 ml

The liquid KMG Liquid is a universal high-gloss polishing liquid for denture acrylics and metals.

#### Applications

- > A faster high gloss result can be achieved.
- > The product is easier to dose because it is not quite as fluid; thus providing a higher yield.
- > KMG Liquid is a homogeneous liquid, therefore making it easier to use.
- > It has a fresher color and a more pleasant aroma.

#### Indications

- > High-gloss polishing of resin or composite veneers
- > High-gloss polishing of resin saddles and resin parts of a prosthesis
- > Metal restorations (e.g. inlays, onlays, cast crowns, etc.)

#### Contraindications

- > Pre-polishing
- > Compensation of major scratches and grooves
- > Polishing of ceramic work and zirconium
- > Application directly in the mouth

## KMG PASTE HIGH-GLOSS POLISHING PASTE

KMG Paste is a high-gloss polishing paste for denture acrylics and metals. It is easily washed off and particularly economical to use.

#### Applications

- > Precise application is possible due to presentation as paste
- > Economical in use, therefore long-lasting
- > Multifunctional use

## C-PLAST SELF-CURING TRAY MATERIAL

---

### ORDERING DETAILS

#### **C-PLAST: polymer (powder)** 1 item

Art. no.	Quantity	Shade
672719	500 g	white
672722	500 g	34

#### **C-PLAST: monomer (liquid)** 1 item

Art. no.	Quantity
674272	500 ml

C-PLAST in white and shade 34 is a dimensionally stable autopolymerizing resin that offers good contrast versus most impression materials. The material can be processed for approx. 5 minutes.

#### **Description**

- > Individual impression tray
- > Individual base plates for bite templates, intraoral registration plates, tooth setups with wax
- > Preparation of individual anterior tooth guide plates

#### **Indication**

- > For use in the treatment of partial or complete edentulism.

## AESTHETIC WAX EVERYDAY AND MODELLING WAX

---

### EVERYDAY WAX AESTHETIC WAX SOFT

AESTHETIC Wax Soft is noted for its smooth consistency.

#### Features

- > Stained in shade 34
- > Solidification point 56 °C

### MODELLING WAX AESTHETIC WAX MEDIUM + HARD

AESTHETIC Wax is a special modelling wax in shade 34 for setting up prosthetics, available in two different degrees of hardness.

#### Features

- > Medium degree of hardness and solidification point 80 – 81 °C (Medium)
- > High degree of hardness and solidification point 84 – 85 °C (Hard)
- > Stained in shade 34

## AESTHETIC COLOR WAX CHARACTERIZATION OF WAX DENTURES

---

We offer 3 ready-mixed modelling waxes similar to the AESTHETIC Color Set Easy to enable the dental technician to design individual characterization of the wax denture.

To design a natural wax try-in, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

#### Features

- > Matches CANDULOR AESTHETIC denture materials
- > Gives the patient a feeling for the esthetics of the final product during the wax try-in

ISO-K  
SEPARATING LIQUID

ISO-K is an alginate-based separating liquid with a proven success record. It is ideally suited for isolating denture base materials, i. e. PMMA resins of all kinds and plaster. This applies to both heat- and cold-curing polymers.

**Application**

- > Isolation of plaster against resin

**Features**

- > Excellent separation
- > Readily absorbed into the plaster
- > Very fine separating film

# INSTRUMENTS. CLASSICS FOR EFFICIENT AND PRECISE WORK.

---

CANDULOR instruments are practical aids to simplify daily routine. Matched to meet the needs of dental technicians and dentists they fully support high levels of commitment.

## TECHNICAL INSTRUMENT SET

### AUXILIARY SET FOR PROSTHETIC RESTORATION

---

The Technical Instrument Set contains all the implements needed for high-grade full dentures.

#### Content

- > 1 Alameter
- > 1 Modelling instrument
- > 1 Artikont articulating ribbon
- > 1 Sliding caliper
- > 1 Rim Former
- > 1 Profile compass
- > 1 Papillameter
- > 1 Instructions for use Alameter
- > 1 Instructions for use Papillameter
- > 1 Instructions for use Instrument Set

## CLINICAL INSTRUMENT SET

### AUXILIARY SET FOR DENTISTS AND PROSTHODONTISTS

---

The Clinical Instrument Set is specifically designed for dentists and prosthodontists to facilitate their everyday work.

#### Content

- > 1 CRS Set 10
- > 1 CANDULOR Marker
- > 1 Alameter
- > 1 Sliding caliper
- > 1 Rim Former
- > 1 Papillameter
- > 1 Bite fork set
- > 1 Instructions for use Alameter
- > 1 Instructions for use Papillameter
- > 1 Instructions for use Instrument Set

This product is **not** available within EU countries.

## PROFILE COMPASS

### TRACING THE CONTOUR OF THE ALVEOLAR RIDGE

Reproduction of the alveolar ridge ensures the correct placement of the teeth as the contour is still easily identified even after the wax template has been applied.

#### Application

- > Marks the course of the alveolar ridge on the model

## PAPILLAMETER

### DETERMINATION OF THE LENGTH OF THE UPPER LIP

The lip closure line is one of the most important parameters especially when determining the length of the anteriors. The Papillameter provides the ideal tool for determining the length of the upper lip and thus the lip closure line.

#### Applications

- > Accurate reading of lip length
- > Simple determination of the length of the anteriors
- > Sterilizable

## RIM FORMER

### MELTING WAX RIMS

The parallelism of the maxillary and mandibular wax bite is one of the most important prerequisites for correct bite registration. Uniform melting of the maxillary and mandibular bites is necessary, in particular for the parallelism of the wax rims to the Camper's plane.

#### Features

- > Angled edge on the metal plate defines the dorsal height by applying to the Tuber maxillae
- > Special openings at the rear end facilitate the discharge of melted wax
- > Well-insulated handle

## BITE FORK SET CHECKING THE OCCLUSAL PLANE

---

The proven bite fork is available in a set with four vertical pins that can be unscrewed. The various planes can be clearly defined with the vertical pins and the rubber band. One of the most important parameters in prosthetics is the parallelism between the occlusal plane and Camper's plane or the bipupillary line. Additional reference planes such as the Frankfurt horizontal plane and the axial-orbital plane are also easily determined. The bite fork set is a reliable instrument for checking the correct position of the plane of occlusion.

### Features

- > Easy to use
- > Sterilizable

## ARTIKONT ARTICULATING RIBBON FOR CHECKING OCCLUSION

---

The Artikont articulating ribbon is a double-sided marking articulating ribbon made of silk for checking occlusion on the model.

### Features

- > Available in three colors
- > High tear resistance
- > Marks repeatedly
- > Easy handling
- > Precision marking/ clear marking

## MODELLING INSTRUMENT MODELLING THE DENTURE'S GINGIVA

---

The handmade tips are well suited for modelling the denture's gingiva or the precise placing of wax and denture base material.

## STIPLING INSTRUMENT PROCESSING THE SURFACE TEXTURE

---

The unique shape of the tungsten carbide stippling bur is exceptionally well suited for processing the surface texture of the denture's gingiva. It carefully carves the resin when forming the lip flange and achieves a natural surface structure.

## SLIDING CALIPER SELECTING ANTERIOR SETS

---

The sliding caliper can be used to determine the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR anterior sets.

## ALAMETER

### DETERMINING THE ANTERIOR SET

The Alameter is an aid for assessing the suitable anterior set of the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR tooth lines.

Many years of experience have shown that the alinasal width gives an indication of the original position of the canines and thus simplifies selection of the appropriate tooth set in edentulous patients.

The Alameter measures the width of the nose and calculates the most appropriate set of anteriors.

#### Features

- > Easy to use
- > Fast selection of anterior tooth set
- > Can be used for the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR tooth lines

## CERAMIC MIXING TRAY

### FOR MIXING RESINS

The mixing tray in high-quality ceramic has 10 bowls for mixing resins plus a further four small bowls which can be used as monomer reservoirs and for handling the fibres.

#### Applications

- > Specially designed for mixing resins
- > The deeper bowls make mixing the resin particularly straight-forward
- > Extremely smooth and scratch-proof surface – hardened resin is easily removed
- > The sharp edges of the small bowls make it easy to scrape off the brush

# DEVICES. DESIGNED TO GIVE THE BEST RESULTS.

---

The CANDULOR devices give dental technicians the opportunity for best processing of the CANDULOR materials and to create fabrications of the highest quality.

## ORDERING DETAILS

### **Articulator CA 3.0** 1 item

Art. no.	Product
668314	Articulator CA 3.0 with 1 Incisal guide 15°, 1 Incisal pointer, 2 Retention disks, 2 Mounting plates, 1 Supporting rod for upper part (opening stop), 2 Plastering covers, 1 Instructions for use

## ARTICULATOR CA 3.0

### THE NAVIGATOR – NATURAL PROSTHETICS THROUGH THREE-DIMENSIONAL MOVEMENT

The challenge of creating highly esthetic patient work also calls for a natural function of the restoration. The CA 3.0 simulates the natural conditions of the jaw joint and thus offers excellent navigation for daily work.

The articulator excels through its double cone shape of the guided joint section. The technical construction of the articulator is designed to simulate three-dimensional natural movements, and these, in turn, are essential for physiological positioning. The results is esthetic quality that works.

The plate system (Split-Cast) is another distinguishing simplification. The magnets are integrated into the articulator. This allows for clean adjustment without corrosion and plaster deposits.

#### **Technical data**

- > Height: 150 mm
- > Width: 145 mm
- > Weight: 690 g
- > Inner construction height:  
100 mm (with Split-Cast)
- > Depth: 160 mm
- > Bonwill triangle: 110 mm
- > Balkwill angle: 25°
- > Retrusive path: 1.5 mm
- > Immediate side shift:  
0 – 2.5 mm fix
- > Condyle path inclination adjustable:  
0° – 60°
- > Incisal guide: 15°
- > Material: anodized aluminum

## ORDERING DETAILS

### Articulator CA 3.0 LARGE 1 item

Art. no.	Product
759233	Articulator CA 3.0 LARGE with 1 Incisal guide 15°, 1 Incisal pointer, 2 Retention disks, 2 Mounting plates, 1 Supporting rod for upper part (opening stop), 2 Plastering covers, 1 Instructions for use CA 3.0

## ARTICULATOR CA 3.0 LARGE WITH INCREASED HEIGHT

The Articulator CA 3.0 LARGE is a 10 mm higher version of the CA 3.0 with an adapted construction height of 126 mm. When used in combination with the CANDULOR “Plate set for use with Splitex®” and the “Compatible centering key for Splitex®”, the CA 3.0 LARGE can be synchronized with the Artex® articulators of the Carbon series from Amann Girrbach.

### Features

- > Same construction height as Artex® articulators of the Carbon series
- > Synchronization of several articulators possible
- > The double cone simulates the shape of the joint head
- > Incorporated magnet
- > Natural Bennet movement possible

### Technical data

- > Height: 160 mm
- > Width: 145 mm
- > Weight: 735 g
- > Inner construction height: 126 mm
- > Depth: 160 mm
- > Bonwill triangle: 110 mm
- > Balkwill angle: 25°
- > Retrusion track: 1.5 mm
- > Immediate side-shift stop: 0 – 2.5 mm fix
- > Angle of jaw track adjustable between 0° – 60°
- > Incisal plate: 15°
- > Material: anodized aluminum

## STATIC POINTER

Primarily, the Static Pointer serves to check the autonomous chewing stability of each individual posterior. This increases the positional stability of the entire denture. It is a simple tool to ensure that the posteriors are positioned over the center of the alveolar ridge. In addition, model analysis points and markings on the bite template can easily be projected on the positioning and adopted. Systematic errors are reduced to a minimum with this tool.

### Benefits for the user

- > Easy to use as suitable for every existing setup system
- > Easy checking of the autonomous chewing stability of individual teeth
- > Ideally complements the Condyliform® II concept and the Gerber setup technique
- > Facilitates model analysis
- > Easy to teach, easy to learn
- > Millimeter scale on base plate

### Benefits for the patient

- > Better positional stability of the dentures
- > No unnecessary restrictions of tongue space
- > Increased chewing ability and wear comfort

### Technical data

- > Weight: 276 g
- > Height: 170 mm
- > Width: 110 mm

The device operates on 3 coin cell batteries (LR44).

The integrated laser corresponds to Class 2.

POLYMASTER  
SELF-CURING POLYMERIZATION

The POLYMASTER is a polymerization device for the casting/pressing technique using self-curing polymers. No acrylic flash is produced during processing, which means no more raised bites. The retention system incorporates a magnet. This ensures reliable repositioning of the model. The ease of investing the models makes for gentler handling and prevents incorrect pressing.

Material and Design

- > Ergonomic Milani design
- > Aluminum lightweight construction
- > Precise conical closure

Features

- > No more raised bites
- > No flask clamp
- > Simple handling
- > Replaceable retention system
- > 2 years guarantee on material defects (proper use is assumed)

Economic benefits

- > Economical use of plaster
- > Time saving of up to 25 minutes versus other press or injection processes

Technical data

- > Weight: 1.8 kg
- > Height: 9 cm
- > Diameter: 13.5 cm

ORDERING DETAILS

POLYMASTER 1 item

Art. no.	Product
662509	POLYMASTER incl. 2 Magnetic retention plates, 1 Allen key, 1 Instructions for use

POLYMASTER Spare parts

Art. no.	Product	Unit
662474	Allen key	1 item
662510	Magnetic retention plates	1 pack of 2 items

Step by Step Instructions

1  
Fill the lower part with plaster.

2  
Invest the wax-up with the side of the silicone index.

3  
Apply plaster to the model and the POLYMASTER lid and close it.

4  
After the setting time of the plaster open the POLYMASTER. Let the mixed AESTHETIC BLUE flow into the counter, the gingivo-buccal fold and palate of the model.

5  
Close POLYMASTER.

## JST FLASK

### HEAT-CURING- POLYMERIZATION

---

The JST flask was developed in collaboration with MDT Jürg Stuck. Three allen screws hold the two halves of the flask together, making the cumbersome flask clamp superfluous. Tapered steel guides center the upper and lower halves of the flask on each other to fit gap-free. When using AESTHETIC Intensive Colors (multicolor packing of the gingiva), incorrect pressing of the layer can be prevented by closing the flask asymmetrically.

#### Features

- > Top and bottom halves screw together with no clamp required
- > Sturdy material
- > Generous inside diameter for large dentures and partial dentures
- > High flask top section allows denture to be retained in an ideal position
- > Conical inside surfaces to facilitate deflasking of the dentures
- > Precise screw fit due to tungsten carbide screws and guide pins

## ORDERING DETAILS

### *JST flask 1 item*

Art. no.	Product
662545	JST flask incl. Allen key for closing the flask halves

### *JST flask Spare parts*

Art. no.	Product	Unit
662474	Allen key	1 item
662546	Brass cover for lower part of the flask	1 item

# REGISTRATION. ENSURING ESTHETICS AND FUNCTION.

---

Determining jaw relationships is one of the most essential process in partial and full prosthetics. It represents an important link in the logic chain and determines how much time needs to be invested in the further work steps. Esthetics and function can be supported significantly through optimal registration.

## CRS SET 10 CANDULOR REGISTRATION SET

### Set for intraoral registration with relative bearings according to McGrane for full dentures

The registration set is used to record the joint-related central position of the mandible for full dentures.

## CRS SET 15 CANDULOR REGISTRATION SET

### Set for intraoral registration with relative bearings according to McGrane for dentulous or partially dentulous jaws and for check-up of full dentures

The registration set is designed for checking full dentures and for registration of the joint-related central position of dentulous and edentulous jaws.

## ORDERING DETAILS

### CRS Set 10 1 set

Art. no.	Product
662513	CRS Set 10 incl. 1 Registration tip short, 1 Registration tip long, 1 Registration plate, 1 Pin supporting plate small, 1 Pin supporting plate large, 6 Screws and washers for the registration plate, 6 Plexiglas plates 1 CANDULOR Marker

662528	Registration tip with sleeve long	1 item
662529	Plexiglas roundels	1 pack à 10 items
696276	CANDULOR Marker	1 item

## CRS SET 20 CANDULOR REGISTRATION SET

### Opening and closing registration method

The registration set allows determination of the jaw relationship in dentulous and edentulous jaws. Smaller occlusal corrections of dentures can also be undertaken directly in the patient's mouth. It is, above all, suitable for patients having difficulty with movements and for patients requiring a lot of room for the tongue. It is also used as part of prosthetic measures and functional therapies.

## CANDULOR MARKER WAX PENCIL FOR MARKING THE REGISTRATION PLATES

The CANDULOR Marker is ideal for marking the registration plates of the CRS sets. For this purpose the plates must be slightly warmed up (e.g. with a Bunsen burner, lighter, etc.) and can then be marked with the CANDULOR Marker. The wax pencil is water resistant and ideal for marking/labelling smooth surfaces such as metal, glass, cellophane and resins. The markings can be removed with commercially available disinfectants/wipes.

# DENTURE BRUSH FOR CLEANING DENTURES

The CANDULOR denture brush effectively cleans dentures. The large, flat bristle area provides optimum surface contact for thorough cleaning of the external arches. The smaller, wedge-shaped bristle area cleans less accessible parts of the internal arches. Teeth and denture acrylics can thus be thoroughly cleaned from deposits and the remains of food. The nylon bristle tips do not scratch denture bodies. The large, shaped handle makes control of the movement of the brush and denture cleaning easy. The ergonomic design of the handle with its non-slip grip make cleaning easy even for persons with restricted movement.

**Features**

- > Thoroughly cleans and removes food residues and deposits
- > Does not scratch tooth and denture surfaces
- > Ergonomically shaped handle for control of brush movement
- > The non-slip handle can be securely held, even if the brush is wet

## ORDERING DETAILS

# SWISS SCHOOL OF PROSTHETICS. LEARNING AND UNDERSTANDING PROSTHETICS.

---

Expand your knowledge of removable prosthetics with the SWISS SCHOOL OF PROSTHETICS. The courses offered by the Swiss School of Prosthetics are your journey to prosthetic success in the laboratory and the clinic. Optimize your professionalism and benefit from your personal growth.

## BASIC COURSE 01 - THEORY COURSE

## THE CLINICAL FOUNDATION OF FULL DENTURES

---

**Course topics**

- > The fundamentals: Support and position stability
- > Anatomic impression
- > Functional impression
- > Pre-bite registration
- > Esthetic checking templates—Determine intra-maxillary relationships
- > Intraoral support pin registration according to GERBER—Determine intermaxillary relationships

## BASIC COURSE 02 - THEORY COURSE

## THE TECHNICAL FOUNDATION OF FULL DENTURES

---

**Course topics**

- > The fundamentals: Support and position stability
- > Situation model
- > Functional tray
- > Functional model, pre-bite registration
- > Esthetic control templates
- > Intraoral support pin registration templates
- > Registrations, esthetic and functional data carriers, orientation of the models in the articulator

## BASIC COURSE 03 - HANDS-ON COURSE

## SETUP – FULL DENTURES IN PHYSIOLOGICAL OCCLUSION

---

**Course topics**

- > What full dentures must perform
- > Physiological setup—the principle
- > Static and dynamic occlusion in the tooth-to-two-tooth relationship
- > Model analysis
- > Anterior tooth setup
- > Posterior tooth setup with the Bonartic® II NFC+
- > Static and dynamic occlusion check
- > Wax modeling—papillae, tooth necks and myodynamic denture body design

## BASIC COURSE 04 - HANDS-ON COURSE

## SETUP – LINGUALIZED FULL DENTURES ACCORDING TO THE GERBER CONCEPT

### Course topics

- > What full dentures must perform
- > Lingualized full dentures according to GERBER
- > Static and dynamic occlusion in tooth-to-tooth relationship
- > Model analysis according to GERBER
- > Anterior tooth setup
- > Posterior tooth setup with the Condyliform II NFC+
- > Static and dynamic occlusion check
- > Wax modeling—papillae, tooth necks, and myodynamic denture body design

## BASIC COURSE 05 - HANDS-ON COURSE

## THE MATERIAL DENTURES ARE MADE FROM

### Course topics

- > Anatomic and myodynamic wax modeling
- > Silicone cuffs for the casting and pressing technique
- > Investment: JST and POLYMASTER flask
- > Conditioning of artificial teeth
- > Coloration schematics based on natural models
- > Color characterization with AESTHETIC Color Set Easy
- > Finishing with AESTHETIC RED & BLUE (casting and pressing)
- > Static and dynamic contact relationships—Re-occluding
- > Trimming and finishing
